Project Name	Smart Lender
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The Smart Lender project aims to understand the challenges faced by loan applicants and banking professionals during the loan approval process. By identifying the needs, pain points, and expectations of customers, the team can develop an intelligent machine learning solution that improves the efficiency and accuracy of loan eligibility prediction. A well-defined customer problem statement helps the team design a user-friendly system that supports faster decision-making, minimizes manual effort, and enhances the overall loan evaluation experience.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A loan applicant	Apply for a loan quickly	The approval process takes a long time	Manual verification and document checking are time-consuming	Frustrated and uncertain
PS-2	A bank credit officer	Evaluate loan applications accurately	There are many applications to review	Manual assessment is slow and may lead to inconsistent decisions	Overloaded and concerned about mistakes
PS-3	A financial analyst	Identify high-risk loan applicants efficiently	It is difficult to analyze large volumes of applicant data	Risk assessment requires evaluating multiple financial and credit factors	Less confident in making quick and reliable decisions
